I am a full-stack web developer specialize in both front-end and back-end development, ensuring seamless and scalable solutions with expertise in data structures and algorithms, passionate about problem-solving and building efficient web applications.

WORK EXPERIENCE

Software Engineer Globe Computer

09/2024 - Present

Achievements/Tasks

- I am currently working at a software company where I am responsible for developing single-page applications using React, with a strong focus on creating intuitive and responsive user interfaces.
- I also collaborated with other team members to ensure the successful development of the single-page web application.
- This approach resulted in a responsive, dynamic, and scalable web application.

PERSONAL PROJECTS

FriendFusion AI ChatBot

- Developed an AI-powered chatbot with secure backend authentication, allowing users to chat, collaborate, and create projects across various domains in real time using the Google Gemini API and MERN stack.

SoundSphere Music App

- Developed a user-authenticated Django music app that allows users to stream and download songs, manage personalized playlists, and explore music across their preferred domains.

Slack Clone

- This SlackClone project replicates the core functionalities of Slack, utilizing Styled Components for design, Redux for state management, and Firebase for real-time database and authentication.

Weather App Sky Cast

- This Open Weather App allows users to enter a city name and instantly fetch the current weather conditions for that location.
